

Abishek R Nambiar

Automation Engineer · Pipeline Architect · Integration Specialist

Kannur, Kerala • +91 94956 77758 • abishekrnambiar@gmail.com • linkedin.com/in/abishekrnambiar • abishekrnambiar.github.io

SUMMARY

Automation Engineer specializing in event-driven systems and intelligent pipeline architecture — from real-time WebSocket signal interception and cross-process automation to human-behavior simulation for anti-detection execution. Builds production-grade tools independently, with strong foundations in Python, FastAPI, and browser-layer engineering.

SKILLS

Automation & Integration: Python Automation, AutoHotkey v2, WebSocket Interception, Chrome Extensions (MV3), Cross-Process Pipelines, Event-Driven Architecture

Backend & APIs: FastAPI, Flask, REST APIs, Local HTTP Servers, JWT Auth, AsyncIO, Swagger UI

Databases & Languages: PostgreSQL, MySQL · Python, JavaScript, SQL

Tools: Git, GitHub, Figma, Telethon (MTPROTO API)

PROJECTS

Trading Signal Automation System

Chrome Extension (MV3) · Python · AutoHotkey v2 · WebSocket · Trading Platform

- Built a Chrome extension (MV3) intercepting live WebSocket frames from a charting platform — capturing strategy signals before DOM render for minimum latency.
- Designed a fully event-driven pipeline: extension POSTs signal payload to a local Python HTTP server which instantly triggers AHK execution — no polling, zero idle lag.
- Engineered AHK v2 as a human-behavior simulation layer — randomizing input timing and action sequences across trading platform UI to bypass broker bot-detection heuristics that ban API-based algo execution.
- Architected clean decoupling via JSON contract between browser, Python, and AHK — each layer independently replaceable without affecting the pipeline.

Automated News & Alert Router

Python · Telethon (MTPROTO API) · AsyncIO · Regex

- Constructed a real-time message routing engine with regex-based keyword filtering and AsyncIO core for low-latency, event-driven processing of high-frequency message streams.
- Fully autonomous after deployment — configurable routing rules, zero manual intervention required.

Secure Digital Election System

FastAPI · PostgreSQL · JWT Auth

- Engineered a booth-level election backend with 4-tier role hierarchy and JWT access control; delivered 6 tested modules including voter registration, conflict escalation, and audit log export.
- Architected a normalized PostgreSQL schema ensuring transactional data integrity across all concurrent workflows.

Trading Journal Calendar

Python · JavaScript · REST API · CSV / PDF Export

- Built and actively uses a full-stack trading journal with Python backend, vanilla JS frontend, calendar-based P&L tracking, and REST endpoints for full CRUD with CSV/PDF export.

EXPERIENCE

Creative Lead | Mulearn TLY — Thalassery, Kerala Jun 2024 – Jul 2025

- Produced Figma-designed event posters and social media assets for 6–10 chapter events over 13 months; exercised independent creative judgment with guidance from a senior lead.

EDUCATION

B.Tech – Information Technology | College of Engineering Thalassery, Kerala 2023 – Present
